

Project Briefing

MedEquip4Kids
the charity that helps children in and out of hospital

The Royal Preston Hospital is a busy regional facility, accepting patients from across Lancashire. The hospital has two Paediatric Neurologists, and as a result a large number of disabled children are seen at the hospital as inpatients for stabilisation of epilepsy and other neurological conditions. Patients travel to Preston from across Lancashire and the North West.

The Paediatricians have asked us to help to provide equipment to improve the comfort of disabled children during their stay at Preston.

The Profiling Bed is specially designed for younger patients, with extendable length depending on the size of the child, and optional cot sides for babies and toddlers. It is designed in child-friendly colours and is easy to use.

This new bed will have the advantage that the child is more comfortable, more easily positioned and able to be moved more safely. It is particularly beneficial to children with multiple disabilities, or following orthopaedic surgery.

The new bed will cost £2,995.00. As a charity we do not pay VAT on medical items, and can negotiate a reduced cost from the supplier.

MedEquip4Kids

About

We are a North West based charity providing medical equipment and improved facilities to hospitals and community projects. In 2005 we provided £250,000 of equipment to 22 hospitals in the region - all funded through donations from the public.

For more information or ideas on how to get involved in some of our exciting fundraising activities, call our Events Team on 0161 798 1600, visit www.medequip4kids.org.uk, or email info@medequip4kids.org.uk
